REACT NATIVE

Bringing Modern Web Techniques to Mobile Development

React Native uses Facebook's JavaScript library for building user interfaces, but targets mobile platforms rather than the browser.

React Native enables you to build mobile applications on **native** platforms using a consistent developer experience based on JavaScript and React.

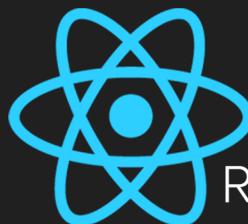

The goal is "learn once, write anywhere", increasing both developer efficiency and reliability while minimizing some of the pain points associated with native mobile app development.

Facebook and Instagram use React Native in a wide variety of production apps and will continue investing in React Native.

In React, a component describes its own appearance; React then handles the rendering for you by invoking the appropriate rendering APIs for iOS or Android.

Styling and layout are more easily managed, while development moves more quickly thanks to live reload and React skills and code reuse.

Get Reactive. Join us at Mid-America IT Connect for our latest presentation. Enjoy a presentation from a thought-leader in tech and our spirited Q&A afterwards!

React Native

JULY 27, 2016 5:30 P.M.

The Mid-America Club on the 80th floor of the Aon building in downtown Chicago

RSVP with the Club at **312-861-1100** or online at **midamclub.com**

Limit **3 guests** per membership. Members must register their guests with the Membership Department.

Presented by Polymorphic Systems
